

## Curriculum Vitae

# Kynan H. G. Hughson [he/him]

1-907-786-4697 • khughson@alaska.edu • kynanhughson.com

---

### Education

- University of California, Los Angeles (UCLA)**, Los Angeles, California, USA **June 2019**
- PhD in Geophysics and Space Physics, concentrations in Planetary Science and Geophysics.
  - Dissertation title: *Mapping and Geophysical Modeling of the Cerean Surface: Insights into the Structure and Composition of the Solar System's Innermost Dwarf Planet*. Committee: Prof. Abby Kavner, Asst. Prof. Seulgi Moon, Prof. Gilles Peltzer, Prof. Christopher Russell (Chair)
- University of California, Los Angeles (UCLA)**, Los Angeles, California, USA **June 2017**
- Master of Science in Geophysics and Space Physics, concentrations in Planetary Science and Geophysics.
- University of New Brunswick (UNB)**, Fredericton, New Brunswick (NB), Canada **May 2014**
- Bachelor of Science: Honors in Geology, Major in Physics, Minor in Math.

---

### Research Experience

- Assistant Professor** **2021 – Present**  
*Department of Geological Sciences, University of Alaska Anchorage*
- I use geophysical and structural-morphometric investigations of periglacial landforms, groundwater systems, and surface slopes to better understand their process history and response to various climate forcings
  - I undertake terrestrial analog research of periglacial and permafrost related landforms on Earth to better understand ice related processes in the solar system
  - I use geologic mapping, geomorphological, and remote sensing investigations to characterize potential ground ice related landforms on Earth and throughout the solar system
  - I teach geomorphology, applied geophysics, remote sensing, planetary surface processes, and geological data analysis for undergraduate and graduate students
- Research Scientist II** **2020 – 2021**  
*School of Earth and Atmospheric Sciences, Georgia Institute of Technology*
- Conducted geologic mapping and geomorphological investigations of potential periglacial landforms in the solar system
  - Conducted geophysical modeling of periglacial groundwater systems and associated landforms on Earth and other planets
  - Conducted terrestrial analog research into periglacial and permafrost processes in the solar system using geophysical techniques in alpine and Arctic environments
  - Investigated into subsurface access and science planning for future ocean world robotic exploration missions
  - Advised independent studies for graduate and undergraduate students in remote sensing.
  - Assisted with, and review, grant proposals written by Georgia Tech professional scientists and graduate students
- Postdoctoral Research Fellow** **2019 – 2020**  
*School of Earth and Atmospheric Sciences, Georgia Institute of Technology*
- Conducted geologic mapping and geomorphological investigations of potential periglacial landforms in the solar system

- Performed geophysical modeling of periglacial groundwater systems and associated landforms on Earth and other planets
- Completed geophysical and geomechanical modeling of impact cratering and surface topography on Earth and Ceres
- Contributed to concept studies of subsurface access and science planning for future ocean world robotic exploration missions

**Graduate Student Researcher**

**2014 – 2019**

*Department of Earth, Planetary, and Space Sciences, UCLA*

- Designed and executed numerous numerical geophysical models attempting to understand the mechanical nature and composition of the near-surface of Ceres using Dawn spacecraft data
- Designed and executed geomorphological mapping campaigns of Ceres
- Processed and managed photometric data and designed and created Dawn based photomosaics
- Collaborated and coordinated with UCLA faculty, Dawn Science Team members, and fellow graduate students across institutions

**Undergraduate Student Researcher**

**2013 – 2014**

*Department of Earth Sciences, UNB*

- Designed and implemented shock recovery apparatuses to understand alumina phase transitions under hypervelocity impacting conditions
- Conducted analyses of Apollo 16 lunar regolith samples to characterize their physical properties and agglutination behavior

**Field Assistant**

**Summer 2011**

*Department of Earth Sciences, UNB*

- Assisted with geological field work and mapping pertaining to hydrothermal systems within the Manicouagan impact structure in central Quebec

**Undergraduate Student Researcher**

**Summer 2010**

*Department of Physics, UNB*

- Designed and helped implement NMR spectroscopy experiments pertaining to supersonic flow in water vapor and various fluorinated gases

**Teaching and Mentoring Experience**

**Assistant Professor**

**08/2021 – Present**

*Department of Geological Sciences, University of Alaska Anchorage*

- Developed and implemented undergraduate/graduate level classes related to geologic data visualization, data analysis, remote sensing, planetary geology, and Geographic Information Systems (e.g. GEOL A315)
- Developed and implemented undergraduate level classes in geomorphology and Earth surfaces processes (GEOL A225)
- Instructs introductory Earth science (GEOL A111)

**Assistant Instructor, Space Systems Design**

**08/2019 – 05/2021**

*School of Earth and Atmospheric Sciences, Georgia Institute of Technology*

- Meet with student teams to review, discuss, and plan project specifics
- Lead students in designing and testing of tough-ice communications modules

**Interim Laboratory Principal Investigator**

**10/2019 – 02/2020**

*School of Earth and Atmospheric Sciences, Georgia Institute of Technology*

- Co-instructor for a space exploration systems design class (VERNE)
- Led weekly meetings for the Planetary Habitability and Technology Laboratory
- Advised independent studies for graduate and undergraduate students in remote sensing
- Assisted with and reviewed grant proposals written by graduate students

## Teaching Assistant/Lecturer, Introduction to Earth Sciences

Fall 2014 and Winter 2018

Department of Earth, Planetary, and Space Sciences, UCLA

- Prepared lectures and laboratory activities related to introductory geological and geophysical topics for 90-100 freshman and sophomore level undergraduates
- Created and graded course assessments
- Contributions recognized with *Excellence in Teaching Award*, Sept. 2018

---

## Funded Grants

### National Aeronautics and Space Administration

Discovery Data Analysis Program (DDAP)

07/2022 – 07/2025

- Project Title: Chill Hills: Exploring Ceres' Hydrology and Geology Through Pingo-like Morphologies
- Role: Principal Investigator
- Total award: \$665,000 USD

### University of Alaska Anchorage

01/2022 – 12/2023

ConocoPhillips Arctic Science and Engineering Award

- Project Title: How Ground Ice Loss Affects Slope Stability and Groundwater Flow in Arctic Watersheds
- Role: Principal Investigator
- Total award: \$49,262 USD

### National Aeronautics and Space Administration

Planetary Science and Technology through Analog Research (PSTAR)

07/2020 – 07/2024

- Project Title: Pingo SubTerranean Aquifer Reconnaissance and Reconstruction (Pingo STARR)
- Role: Science Principal Investigator
- Total award: \$2,100,000 USD

### Natural Sciences and Engineering Research Council of Canada

Undergraduate Student Research Award

05/2013 – 08/2013

- Project Title: Numerical Modeling and Experimental Design for Hypervelocity Shock Recovery Systems
- Role: Researcher
- Total Award: \$5,600 CAD

### Natural Sciences and Engineering Research Council of Canada

Undergraduate Student Research Award

05/2011 – 08/2011

- Project Title: Geological and Geochemical Sampling of the Manicouagan Impact Structure
- Role: Field Assistant
- Total Award: \$5,600 CAD
- Total Award: \$5,600 CAD

---

## Project Experience

### Chill Hills: Exploring Ceres' Hydrology and Geology Through Pingo-like Morphologies

2022 – Present

Principal Investigator

- The Chill Hills project is a collaborative effort that I am leading between the University of Alaska, Cornell University, the Planetary Science Institute, and NASA's Jet Propulsion Laboratory that seeks to identify and characterize 100 m scale potential pingo analogs on the dwarf planet Ceres
- This program will form the most comprehensible database possible of potential periglacial-like features on the solar system's innermost dwarf planet and investigate the possibility of long lived hydrologic systems on this ancient world

- This project includes graduate and undergraduate student investigators

### **Alaska EPSCoR Fire & Ice**

**2021 – Present**

*Boreal Fire and Coastal Margins Science Team Member*

- *Fire & Ice* is a 5-year, \$20 million NSF sponsored effort to conduct research into changes to fire risk and behavior in Alaska's boreal forest, and changes to physical and chemical variables that influence biological communities in the nearshore Gulf of Alaska
- I am involved with utilizing remote sensing data to better characterize boreal fuel maps and coastal margin turbidity

### **Pingo SubTerranean Reconnaissance And Reconstruction (Pingo STARR)**

**2020 – Present**

*Science Principal Investigator*

- Pingo STARR is a multi-year field geological and geophysical field campaign to examine the deep subsurface structure of pingos in the North American Arctic
- It is also a test program for lander and astronaut scale technologies and strategies for detecting and characterizing ground ice rich environments on other worlds
- This project includes graduate and undergraduate student investigators

### **NASA's Europa Clipper Mission**

**2019 – 2021**

*REASON radar experiment Affiliate Science Team Member*

- A flagship class mission to characterize the geology and habitability of Jupiter's moon Europa
- REASON: Radar for Europa Assessment and Sound: Ocean to Near-surface is a multi-frequency, multi-channel ice penetrating radar system

### **Vertical Entry Robot for Navigating Europa (VERNE)**

**2019 – 2021**

*Science Investigator and Student Mentor*

- VERNE is a NASA funded SESAME (Scientific Exploration Subsurface Access Mechanism for Europa) project headquartered at Georgia Tech developing a full-cycle architecture for penetrating the european ice-shell, conducting ice and ocean science, and searching for life on Europa
- VERNE is a broad project that includes graduate student lead design elements and leadership from Postdoctoral Investigators, including myself

### **Enceladus Distributed Geophysical Experiment (EDGE)**

**2019 – 2021**

*Science Investigator*

- EDGE is a JPL lead investigation exploring possible single and multi-node architectures for conducting surface geophysical surveys of Enceladus
- I am exploring the use of active and passive electromagnetic methods for use in understanding the detailed conductivity and stratigraphic structure of the ice-shell

### **Europa Seismic Package (ESP)**

**2019 – 2021**

*Science Investigator*

- ESP is a JPL lead investigation designed to develop broadband seismic sensors for use on Europa and test these stations in various configurations in terrestrial analog deployments
- I am involved in instrument development and field testing

### **Project Oracle**

**2018 – Present**

*Co-Investigator*

- Oracle is planetary mission concept headquartered at the University of Colorado, Boulder's Laboratory for Atmospheric and Space Physics
- Oracle is a Discovery class planetary mission concept to the suspected water-rich asteroid 24 Themis and an active main belt comet

### **NASA's Dawn Mission**

**2014 – 2020**

*Associate Science Team Member, Geologic Mapping Group Member, Ground Ice Working Group Co-Chair*

- A NASA Discovery class mission to explore the asteroid 4 Vesta and dwarf planet 1 Ceres

---

## Scholarships and Fellowships

- UCLA, Dissertation Year Fellowship, \$40,000 USD 2018 – 2019
- UCLA Department of Earth, Planetary, and Space Sciences, Graduate Dean's Scholarship, \$6,200 USD Fall 2014
- UNB, Greenblatt Memorial Scholarship, \$1,000 CAD 2013 – 2014
- UNB Department of Physics, Dr. Haider R. Zaidi Memorial Scholarship, \$350 CAD 2013 – 2014
- UNB, Michael (Mike) McAloon Memorial Scholarship in Physics, \$1,500 CAD 2012 – 2014
- UNB Department of Earth Sciences, Sharon L.W. Bachinski Memorial Scholarship, \$1,100 2012 – 2013
- UNB, UNB-Fredericton Student Union Human Development Scholarship, \$1,100 CAD 2011 – 2012
- UNB Department of Earth Sciences, Robert Quartermain Geology Scholarship, \$5,000 CAD 2010 – 2012
- UNB, UNB Entrance Scholarship, \$20,000 CAD 2009 – 2013

---

## Honors and Awards

- NASA Group Achievement Award as a contributing member of the Dawn Mission Science Team 2019
- UCLA Department of Earth, Planetary, and Space Sciences, Eugene B. Waggoner Prize for sustained superior academic achievement and demonstrated excellence in original research, \$2,000 USD 2018
- UCLA Department of Earth, Planetary, and Space Sciences, Excellence in Teaching Award, \$500 USD 2018
- Joint Japan Geophysical Union-American Geophysical Union Meeting, Outstanding Student Paper Award (Poster in Planetary Science; Abs. #PPS02-P18) 2017
- UCLA Department of Earth, Planetary, and Space Sciences Annual Student Symposium, Best Paper Award 2017
- American Geophysical Union Fall Meeting, Outstanding Student Paper Award (Poster in Planetary Science; Abs. #2172) 2015
- UNB Convocation, Lieutenant Governor's Silver Medal in Science 2014
- UNB Department of Earth Sciences, C.W. Argue Prize, \$2,000 CAD 2011
- Association of Professional Engineers and Geoscientists of New Brunswick, Prize for Excellence in Geology, \$2,000 CAD 2010
- UNB Department of Physics, Derek L. Livesey Memorial Prize in Physics, \$2,000 CAD 2010
- UNB, Berton C. Foster Memorial Prize, \$800 CAD 2010

---

### **Invited Talks**

#### *University of Alaska Anchorage*

- Department of Geological Sciences Seminar:  
"What Lies Beneath: How Landforms on Earth Inform us of Ice on Ceres"

**February 2021**

#### *Georgia Institute of Technology*

- School of Earth and Atmospheric Sciences Planetary and Astrobiology Seminar:  
"The Final Harvest of Dawn: Spotlight on Occator Crater"

**January 2021**

### *Brown University*

- Department of Earth, Environmental and Planetary Sciences: “Ceres After Dawn” **November 2020**

### *Colorado School of Mines*

- Department of Geology & Geological Engineering Seminar: “Buried Treasure: How Ceres Shifted the Paradigm on Water in the Asteroid Belt” **June 2020**

### *Agnes Scott College*

- Department of Physics Colloquium: “Ceres in the Light of Dawn” **April 2020**

### *Emory University*

- Department of Astronomy Public Observing Night: “Ceres in the Light of Dawn” **October 2019**

### *Georgia Institute of Technology*

- School of Earth and Atmospheric Sciences Colloquium: “Dawn at Ceres or: How I Learned to Stop Worrying and Love an Icy Dwarf Planet” **March 2019**

### *Jet Propulsion Laboratory*

- Planetary Science Group: “Will it Bend? Insights from Mechanical Analyses of the Nar Sulcus Fractures on Ceres” **July 2018**
- Planetary Science Group: “Layered and Low-Aspect Ratio Ejecta on Ceres: Probing the Effect of Ground Ice on Fluidized Ejecta Deposits” **June 2017**

---

### **Industry Experience**

#### **Geophysical Intern at Southwestern Energy Company**

**Summer 2012**

*Houston, TX, USA*

- Conducted a quality review of 3D seismic data gathered from surveys in the Marcellus shale (PA).
- Produced synthetic 3D seismic data using the MESA software package in order to optimize geophone placement geometry for future surveys.

---

### **University, Professional, and Public Service**

#### **Session Convener**

*Geological Society of America Annual Meeting, Denver CO*

**October 2022**

- Session convener and chair for T100, ‘Tiny Worlds with Big Potential: Exploring Small Bodies Throughout the Solar System’

*Geological Society of America Annual Meeting, Online*

**October 2020**

- Session convener and chair for T122, ‘The Big Picture from Small Worlds: Dwarf Planets, Trans-Neptunian Objects, Asteroids, Comets, and More’

*Geological Society of America Annual Meeting, Phoenix AZ*

**September 2019**

- Session convener and chair for T90, ‘The Big Picture from Small Bodies: Dwarf Planets, Asteroids, and Comets’

*Geological Society of America Annual Meeting, Indianapolis IN*

**November 2018**

- Session convener and chair for T143, ‘The Age of Small World Exploration: Major Results from Minor Planets and Other Small Solar System Bodies’

#### **Committee Experience**

*University of Alaska Anchorage, Department of Geological Sciences*

- Scholarship committee member **2022 – present**

#### **Reviewer**

*NASA Postdoctoral Program - Reviewer*

**2022**

*NASA - Panelist*

**2020**

*NASA - Panel executive secretary*

**2018**

*Journal of Geophysical Research: Planets - Peer reviewer*

**2018 – Present**

*Icarus - Peer reviewer*

**2019 – Present**

*Journal of Structural Geology*

**2021 – Present**

### **Session Chair**

*American Geophysical Union Fall Meeting, New Orleans LA*

**December 2017**

- Session chair for P43A and P53G, 'Ceres and Vesta: Understanding the "Planets" of the Asteroid Belt I & II'

### **Public Outreach Volunteer**

*University of Alaska Anchorage, Department of Geological Sciences*

**2021 - Present**

- Prepared demonstrations and conducted field trips for Anchorage area high school students related to the geological sciences and the geology of southcentral Alaska. Activities and demonstrations were focused on engaging Native Alaskans in partnership with the Alaska Native Science & Engineering Program (ANSEP).

*UCLA, Department of Earth, Planetary, and Space Sciences*

**2015 – 2018**

- Prepared and demonstrated physical models of natural phenomena such as magnetism, impact cratering, and tectonism to elementary school children at various public school in Los Angeles

*Dawn Mission Science Team*

**2015 – 2017**

- Participated in UCLA's annual 'Exploring Your Universe' Science Symposium with a focus on educating the public about NASA's Dawn mission, the asteroid Vesta, and the dwarf planet Ceres
- Given 7 public outreach lectures on the Dawn mission and Ceres aimed at elementary school children, undergraduates, and adults at UCLA and various public schools in California and Colorado

### **Vice President**

*UCLA, Earth, Planetary, and Space Sciences Student Organization*

**2015 – 2017**

- Organized various graduate and undergraduate panels on how to be successful in academia
- Organized the annual 'Los Angeles Basin Student Research Symposium'
- Organized and supervised regular student networking events
- Organized and lead geological field trips for graduate students

### **Meeting Organizer**

*Dawn Science Team Meeting, Santa Monica, CA*

**May 2015**

---

### **Technical Skills**

- Programming languages and mathematical packages: Python (including SimPEG), Java, Maple
- Computer aided drafting/model building: AutoCAD, Trelis
- Geographic information systems: ArcGIS, QGIS, ENVI
- Image processing and spectral analysis: Python, ArcGIS, QGIS, ENVI, ISIS 3
- Computer aided graphic design: Adobe Creative Suite 6
- Productivity: Microsoft Office Suite
- Operating systems: Linux (Ubuntu), Mac OS, Windows OS
- Geological field skills (mapping and sampling)
- Geophysical field skills (deployment and operation of seismic, electric, and electromagnetic instruments)
- Drill core logging and geophysical data collection/interpretation
- Certified Unmanned Aerial Systems pilot for recreational and research purposes

---

### **Professional Memberships**

- Geological Society of America
- American Geophysical Union
- Alaska Geological Society
